Pollution Incident Response Plan

Environment Protection Licence 11204

Business Activity:

Receival, storage and processing of seed cotton. The site consists of cotton module storage, Unidirectional weighbridge, Administration Building, Cotton gin, Cotton Bale Storage Facility and associated cotton trash disposal area.

The facilities peak activity period is during the cotton harvest period from April through August each year.

During the peak period there a large number of truck movements delivering cotton modules to the facility and also transporting cotton bales away from the facility.

The cotton processing plant or “Gin”, can operate 24 hours per day, 7 days a week. The Gin removes waste trash and seed and packages the processed cotton into bales. The processed cotton is either transported by road or stored onsite and packed into containers that are freighted by rail. This continues until the season is completed.

The waste by-product called “cotton trash” and is transport to a site where it is incorporated into the soil. Here the trash is broken down into compost, increasing the levels of soil carbon.

Outside the peak season the gin is in repair and maintenance mode and the level of activity at the facility is greatly reduced.

Objectives of the Plan:

- Ensure comprehensive and timely communication about a pollution incident to staff at the facility, the EPA, WorkCover NSW, SES NSW and the Rural Fire Service.
- Minimise and control the risk of a pollution incident at the facility through the identification of hazards and risks and the development of planned actions to minimise and manage those risks.
- Ensure that the plan is implemented effectively by responsible and trained staff and to test the plan regularly for accuracy, currency and suitability. This current version of the Pollution Incident Response Plan has been tested and revised through implementation of the Pollution Incident Response Scenario.

Pollution Incident Response Plan

Location, Description and Likelihood of Hazards

Site	Hazard	Pre-emptive actions	Risk Rating
LPG Storage tank 59,000l.	Rupture of tank or fill hose during filling operation	<ul style="list-style-type: none"> Tank undergoes regular maintenance. Tank filled by reputable LPG Supplier. 	Low
	Fire resulting from leak and external ignition source	<ul style="list-style-type: none"> Area surrounding tank maintain free of vegetation and ignition sources. Fire Hoses and fire extinguishers provided and maintained at tank. 	Low
Trash Yard	Fire – Burning trash from gin. Fire could be transported and dumped into the trash yard from the Gin Mote, setting alight stored trash.	<ul style="list-style-type: none"> Trash is stored in long windrows which limits the quantity of trash that would burn. The trash yard is isolated from the main work area and module storage yards. A trash yard fire would generate a reasonable amount of smoke but would not put people in danger. 	Low
	Contaminated runoff from yard after rain	The trash that is a by-product of the ginning process is considered to be a resource. It is converted to compost increasing levels of soil carbon. There is little chance of contaminants from the compost entering water sources due to the distance to the nearest water source.	Low

Pollution Incident Response Plan

Site	Hazard	Pre-emptive actions	Risk Rating
Module Yard	<p>Fire - Stored cotton modules. Modules could be set on fire through a number of avenues</p> <ul style="list-style-type: none"> • A “hot” module delivered to the yard which ignites • External ignition source 	<ul style="list-style-type: none"> • The Company has a comprehensive firefighting manual and procedures. • Auscott Limited has an extensive investment in firefighting equipment. • Any fire out break would be quickly contained and extinguished. • The module yard is separated from the main work areas and a fire would generate a reasonable amount of smoke but would not put people in danger. 	Low
	<p>Contaminated runoff from yard after rain</p>		<p>All runoff is captured in a closed drainage system which runs to a lift pump where it is pumped into earthen wall dam. In the case of a large rain event where the runoff can't be contained, the water is discharged at a designated discharge point which intern is distributed onto farmland and contained there.</p>
Bale Pad	<p>Fire – Stored cotton bales Cotton bales could be ignited by fire bales from gin. A fire would generate considerable heat and smoke.</p>	<ul style="list-style-type: none"> • Identified fire bales are segregated from the stored bales. • Comprehensive firefighting manual and procedures. • Extensive investment in firefighting equipment. 	Low
Cyclone System	<p>Cyclone malfunction causing gin dust emissions to atmosphere</p>	<ul style="list-style-type: none"> • Gin dust emissions are non-toxic. • Cyclones are located externally to the work area and pose minimal health risk. 	Low

Pollution Incident Response Plan

Site	Hazard	Pre-emptive actions	Risk Rating
Transformer Yard	Fire. Release of inert oil, up to 1000lt. from transformers.	<ul style="list-style-type: none"> Transformer yard is surrounded by concrete bund. The transformers are owned and maintained by Essential Energy and undergo an annual inspection and maintenance program. Transformer yards located in low traffic areas and away from main work areas. 	Low
	Toxic fumes and smoke released to atmosphere.	Exposure to fumes and smoke could cause serious health problems.	High Health risk
Diesel Fuel Storage Tank Capacity 10,000lt	Spill. Tank overfilled, hit by passing machinery	Above ground storage, protected by steel bunding. Not located near waterway, equipment available to contain leaking diesel	Low

Inventory of Pollutants

Pollutant	Location	Map Reference
Diesel Fuel	Fuel Storage Tank	
LPG	LPG Storage Tank	
Cotton Trash	Trash Yard	
Gin Dust	Cyclone Rack	

Pollution Incident Response Plan

Water Discharge Point

The water discharge point for the Trangie Gin Yard is located south east of Gin 10 approximately 1.3 kilometres from the main gate travelling toward Narromine and adjacent to the Mitchell Highway. The discharge point is marked with an indicator as shown in the photo below and the GPS coordinates are;
Latitude $-32^{\circ}4'40.37''$
Longitude $148^{\circ}2'51.27''$

Pollution Incident Response Plan

Staff Training

All staff will attend a seasonal induction and training sessions at the beginning of each Ginning Season. The induction program will include an information and training session on

- Firefighting procedures,
- Operate Fire Fighting Equipment
- Emergency response procedures.
- Pollution incident response procedures (including incident response scenario)

Management staff will attend an annual crisis management simulation exercise.

Pollution Incident Response Plan

Pollution Incident Response Plan

Phase 1 Potential Pollution Incident Reported: Incident Assessment

The Pollution Incident Response Plan may be triggered by the report of a potential pollution incident to the Gin Manager / Shift Supervisor.

- The Gin Manager / Shift Supervisor will begin preliminary assessment of the incident to determine the severity of the incident ie “if there is risk of material harm to the environment”.
- If it is likely that the environment will be harmed then it is a notifiable incident. Refer to definition of pollution incident and material harm.
- If it is a notifiable incident the Gin Manager / Shift Supervisor will contact the Valley Operations Manager of the incident.
- The Macquarie Valley General Manager or his representative will immediately notify the Environmental Protection Authority and begin actions to activate the Crisis Management Plan.

Phase 2 Response: Plan initiation

- The Gin Manager / Shift Supervisor will assemble an incident response crew
- The General Manager will assemble a crisis management team and commence the crisis response plan
- The Gin Manager / Shift Supervisor will
 - make resources available to the response crew
 - alert all people on site, employees, contractors, visitors, to the emergency and commence emergency response procedures.
 - commence record keeping – Incident Report Form
- The Incident response crew will
 - Develop a plan to respond to the emergency
 - Assemble required resources
 - Respond to the emergency and control the pollution incident
 - Communicate and cooperate with any / all state emergency authorities: Rural Fire Service (RFS), Police, State Emergency Service (SES), WorkCover, EPA.
- The State Authorities will take control of incident response activities as and when necessary.
- The WHS&E Coordinator will
 - Assist with implementation of emergency procedures
 - Take over from the Gin Manager / Shift Supervisor responsibility for gathering environmental information and records and commence incident investigation.

Pollution Incident Response Plan

Phase 3 Response Completion - The pollution incident has been controlled

- The Operations Manager / Gin Manager will resume control of the site after hand over from State Authorities.
- The response crew will commence mopping up activities:
 - Ensure all waste material from the incident does not escape from control and is disposed of legally, safely and properly
 - Equipment and machinery washed down and return to normal service
- The response crew leader will report to Gin manager / Shift Supervisor when incident site is ready to be returned to normal activity.
- The Gin Manager / Shift Supervisor will inspect workplace to ensure it is safe and operational.
- The WHS&E Coordinator will complete incident investigation report
- All Managers and Employees involved in the incident response activities will attend an incident debrief meeting from which a written report will be prepared.
