

# Product Assessment

## Smallco Investment Fund

Report data as at 31 May 2021  
Rating issued on 17 Jun 2021

### VIEWPOINT

The Fund, managed by Smallco Investment Manager Limited (Smallco), offers a high conviction, long/short exposure to Australian smaller companies. The Fund does not typically invest in the resources sector, biotechnology sector and other structurally challenged industries. In addition, Smallco is highly selective with regard to short selling and is therefore rarely utilised. Zenith has a high regard for Smallco given its experienced team of investment professionals and robust investment process.

Established in 2000 by Rob Hopkins and Bill Ryan, Smallco is a Sydney-based boutique fund manager that specialises in managing Australian equity strategies. As at 31 May 2021, Smallco managed approximately \$A 970 million firmwide. In response to negative market movements and outflows, Smallco reopened the Fund to new investment in April 2020, after being hard closed since January 2017.

The investment team of seven is led by Hopkins, who is supported by Ryan, Andrew Hokin, Paul Graham, Craig Miller, Adam Simpson and Han Xu. Hopkins is the lead portfolio manager for the Fund with increasing involvement from Simpson on the day-to-day portfolio management decisions. Despite this, decision-making for the purposes of portfolio construction follows a consensus approach. All team members hold stock coverage responsibilities, with a number of key sectors allocated across the team. Outside of the key sectors, team members are given the freedom and flexibility to cover any stocks in any sector. Zenith considers the team to be experienced and competent investors.

Smallco's investment philosophy is centred on the belief that equity markets are inefficient and that rigorous fundamental research can identify opportunities to generate excess returns. Smallco targets quality companies that are likely to exceed consensus earnings expectations and out of favour companies expected to at least meet earnings expectations. Smallco aims to invest in companies with the potential to double in value over a three-year investment period.

The portfolio construction process is primarily driven by fundamental analysis conducted by the investment team. Smallco constructs the Fund through a benchmark unaware approach. Portfolio guidelines, stock liquidity and downside risk are considered to avoid unnecessary risks within the process.

Whilst Smallco is permitted to vary the Fund's net equity exposure between 0% to 150%, its has typically been around 80% given the Fund's long-biased nature. Smallco does not make tactical asset allocation decisions, with the Fund's net equity exposure primarily a result of available investment opportunities, both long and short. Zenith is comfortable with Smallco's portfolio construction approach, believing it ensures a strong connection between the output of the security selection process and the resultant weight of the stock in the portfolio.

### FUND FACTS

- Holds between 25 and 35 securities
- Portfolio turnover expected to be approximately 40% p.a.
- S&P/ASX 100 exposure limited to 20% of the Fund at time of acquisition
- Zenith has assigned the Fund a Responsible Investment Classification of **Aware**

## APPLICATIONS OF INVESTMENT

### SECTOR CHARACTERISTICS

The Zenith “Australian Shares – Long Short” sector consists of long/short funds investing across the market cap spectrum of the Australian equity market. These funds can short sell equities and/or SPI futures to capture excess return opportunities and manage risk. Over the long term, Zenith expects quality long/short funds to outperform the S&P/ASX 300 Accumulation Index given a manager’s ability to generate excess returns from short selling.

Each long/short manager uses vastly different investment processes. Some managers are fundamentally driven, others use quantitative tools, and others have trading style biases. Funds in this sector employ active extension or variable beta investment styles. Active extension funds can be used in place of a traditional long-only fund where the investor wishes to increase the “activeness” of their fund allocations in equities. That is, the fund can build a higher conviction portfolio by shorting stocks that it thinks will underperform and use the proceeds to invest long in stocks that may outperform. Variable beta funds can be used by investors to reduce the market risk of investing with a long-only fund that must be close to fully invested. Variable beta funds can decrease their market exposures to protect against market falls (by increasing shorts or cash holdings). In general, investing in quality variable beta funds should provide investors “smoother” returns than simply investing in the index.

Zenith benchmarks all funds in this sector against the S&P/ASX 300 Accumulation Index. However, many managers in this category benchmark their funds against the S&P/ASX 200 Accumulation Index. Both indices are market-capitalisation weighted, resulting in companies with the largest market capitalisations receiving the heaviest weightings within the index. Over the longer term, Zenith believes there will be minimal difference between the return profiles of these indices.

The Australian share market, as represented by the S&P/ASX 300 Index, is highly concentrated and narrow. Technically, a company is considered large cap if it falls within the S&P/ASX 50 Index, with companies falling between the S&P/ASX 50 and S&P/ASX 100 considered mid cap. All stocks outside of the S&P/ASX 100 Index are considered small capitalisation stocks.

As at 31 May 2021, the Financials and Materials sectors combined represented a significant portion of the S&P/ASX 300 Accumulation Index, with the Financials sector accounting for approximately 29.9% of the Index, and Materials approximately 20.7%. The split between Industrials and Resources stocks was approximately 76%/24%. The top 10 stocks represented approximately 44.7% of the weighting of the Index, and the top 20 stocks represented over 55% of the Index.

### PORTFOLIO APPLICATIONS

In general, compared to most other asset classes, equities offer investors the opportunity for higher capital growth over the longer term with some income. However, this higher growth is also often associated with higher volatility. Therefore, it is recommended that investors adopt a longer timeframe when investing in equities.

Investors should also be cognisant of the fact that the Australian equity market is relatively concentrated, with the Materials and Financials sectors dominating the market. The market also only represents approximately 2% of global equity markets (in terms of market capitalisation). Therefore, to mitigate this concentration risk it is highly recommended that investors diversify their investments across asset classes, both domestically and globally.

Unlike a traditional long-only Australian equities fund, the Fund utilises a variable beta long/short investment strategy, providing Smallco with greater flexibility to add value for investors. The ability to short sell and hold high levels of cash enables the Fund to profit during a market downturn. Conversely, the Fund may potentially lag long-only strategies during market rallies. However, Zenith notes that Smallco is highly selective with short selling and it is rarely utilised.

Although Smallco has the ability to vary its net equity exposure, it has, over the long term, oscillated around 80%. As a result, Zenith notes that the Fund will generally exhibit similar risk/return characteristics to long-only funds.

The Fund is likely to exhibit characteristics in common with other more traditional growth-orientated offerings. Manager-specific risk can be mitigated by blending the Fund with other Australian equity funds. As such, the Fund could be blended with style-neutral or value-orientated Australian equities products to achieve a more diversified exposure to the Australian equity sector.

The Fund is typically heavily weighted towards small capitalisation companies and will not invest in resources and biotechnology stocks. Accordingly, Zenith believes that the Fund may be suitable as a satellite holding within a well-diversified Australian equities portfolio and has the potential to enhance a portfolio’s risk/return profile.

The Fund’s portfolio turnover is expected to be approximately 40% p.a., which Zenith considers low. Smallco was not able to provide any insight on the proportion of expected turnover attributed to the resizing of existing positions and that which is due to initiating and closing positions. Given this expected level of turnover, the majority of the Fund’s returns are expected to be delivered via capital appreciation in the unit price, rather than through the realisation of capital gains in income distributions. In addition, realised capital gains are highly likely to be eligible for the capital gains tax discount. As such, holding all else equal, the Fund may be more appealing to investors who are high marginal tax rate payers as it will result in superior after-tax return outcomes.

## RISKS OF THE INVESTMENT

### SECTOR RISKS

Funds within the ‘Australian Long Short’ sector are exposed to the following broad risks:

**MARKET & ECONOMIC RISK:** As is the case with all long-only Australian Share funds, the biggest risk to performance is a sustained downturn across the Australian share market. In addition, changes in economic, social, technological or political conditions, as well as market sentiment could also lead to negative fund performance. This risk can be significantly reduced by investors adhering to a Fund’s prescribed

investment time frame.

**SPECIFIC SECURITY RISK:** This is the risk associated with an individual security. The price of shares in a company may be affected by unexpected changes in that company's operations such as changes in management or the loss of a significant customer.

**LIQUIDITY RISK:** This is the risk that a security or asset cannot be traded quickly enough due to insufficient trading volumes in the market. When trading volumes are low, sellers can significantly impact the price of a security when attempting to quickly exit a material position.

**STYLE BIAS RISK:** Australian equity managers will either employ a growth, value or neutral (combination of value and growth) styled approach to investing. Each style is conducive to certain market conditions. That is, growth should outperform value in an upward-trending market and vice versa in a downward-trending market. As with market risk, investors should adhere to the Fund's investment time frame to avoid short-term market movements and style impact.

**CAPACITY RISK:** High levels of funds under management (FUM) can present additional challenges to an Australian equity manager, as high FUM has the potential to hamper the manager's ability to trade efficiently and/or be forced to disclose substantial shareholdings to the market (most common in smaller companies).

**SHORT RISK:** The ability to short stocks gives rise to losses if the stock rises in value. Additionally, there are regulatory risks associated with shorting as, on occasion, some markets have banned new short selling positions during strong down markets. This may limit the manager's ability to profit from falling markets due to a lack of access to new shorts.

**REGULATORY RISK:** The ASIC Regulatory Guide 97 'Disclosing Fees and Costs in Product Disclosure Statements and Periodic Statements' came into effect on 1 October 2017 and seeks to establish a common framework for disclosing fees with respect to registered managed investment schemes issued to retail investors.

In November 2019, ASIC released its final recommendations, with proposed changes to be phased in from 30 September 2020, with all Funds required to be compliant by 30 September 2022.

In its current form, RG97 will not impact the actual costs (or after fee returns) on existing investments. Rather, the guide is focused on providing increased transparency with respect to the costs of management. Given this, it is feasible that under RG97, investors become more sensitive to the costs charged and seek lower cost alternatives, potentially leading to fund outflows.

## FUND RISKS

Zenith has identified the following key risks of the Fund. Although Zenith believes the risks noted are all significant, we have listed them in order of importance. In addition, we have not intended to highlight all possible risks.

**KEY PERSON RISK:** As with any boutique manager, Zenith views key person risk at Smallco to be high. Zenith believes Rob Hopkins, Bill Ryan and Andrew Hokin are critical members of the investment team and a departure would be a significant

loss to the firm, triggering an immediate review of the Fund's rating. Specific to the Fund, Zenith notes Adam Simpson's increasing involvement with regard to the day-to-day portfolio management decisions.

Zenith acknowledges the material equity stake of all four members in the business and we believe that this mitigates the risk of a departure over the medium term. In addition, we believe there is sufficient depth in the team to take over the daily management of the Fund should Smallco experience a material departure. Zenith notes that there have not been any departures from the firm since its inception.

**CAPACITY RISK:** Excessive levels of funds under management (FUM) can inhibit a manager's ability to trade portfolio positions effectively and may therefore limit outperformance potential. As at 31 May 2021, Smallco managed approximately \$A 970 million firmwide. Overall, Zenith does not believe the Fund is currently impacted by capacity limitations.

In response to negative market movements and outflows, Smallco reopened the Fund to new investment in April 2020, after being hard closed since January 2017. Zenith notes that Smallco has a strong track record of prudently managing capacity, having previously closed the Fund at conservative levels of FUM. Notwithstanding this, Zenith will continue to monitor Smallco's level of FUM and corresponding excess return generation closely to ensure that increasing levels of FUM do not begin to negatively impact performance.

**RELATIVE PERFORMANCE RISK:** Zenith notes that the Fund is more concentrated than many Australian equities peers. Zenith believes that a concentrated portfolio has greater exposure to stock-specific risk than more diversified strategies and, as such, investors should be cognisant that the Fund may experience capital volatility in excess of a more diversified strategy. In addition, given that the Fund follows a benchmark unaware investment approach, its performance may diverge substantially from the benchmark and peers.

**BUSINESS RISK:** Whilst Zenith acknowledges that Smallco is profitable at current levels of FUM, we note that it has a relatively concentrated client base, with a material proportion of firmwide FUM sourced from a single client. Whilst the loss of this client could materially impact the firm's profitability and longevity, Smallco has noted that, at current levels of FUM, they would remain profitable if this were to occur.

**TEAM FOCUS RISK:** While Zenith believes Smallco's team is sufficiently resourced and experienced, we note that the team is also responsible for the Smallco Broadcap strategy. As such, Zenith believes that the team's research focus may be diluted. However, we note that there is a high level of overlap between the strategies, which somewhat mitigates our concerns.

**LEVERAGE RISK:** The Fund has the ability to short sell stocks and use the proceeds to increase its long exposure. This increases an investor's exposure to Smallco's stock specific decisions, which can magnify returns and losses. The maximum gross exposure of the Fund is limited to 150% of the value of the Fund's net assets (i.e. the sum of the Fund's long and short exposures).

However, the gross exposure of the Fund has historically remained lower than peers at approximately 80%, with short

selling used opportunistically. Notwithstanding this, Smallco has the ability to borrow up to 30% of the Fund's Net Asset Value (NAV) and allow the gearing level to passively drift to 50%. However, Zenith notes that gearing is rarely implemented, with Smallco last utilising its gearing facility in 2006.

**COUNTERPARTY RISK:** The Fund's custody and counterparty contracts are subject to potential default risk. In particular, the Fund is exposed to counterparty risk with its securities lender, Macquarie. Assets in the Fund are required to be transferred to Macquarie when borrowing stock for short selling. Assets up to the required collateral amount are held on Macquarie's balance sheet and are not segregated from other Macquarie assets. Should Macquarie become insolvent, there is a risk that the assets posted by the Fund may not be recoverable.

## QUALITATIVE DUE DILIGENCE

### ORGANISATION

Established in 2000 by Rob Hopkins and Bill Ryan, Smallco Investment Manager Limited (Smallco) is a Sydney-based boutique fund manager that specialises in managing Australian equity strategies. Smallco's boutique structure allows for equity participation amongst the broader team, which Zenith believes is a positive, as it allows for closer alignment of interests between the investment team and investors in the Fund and also serves as a staff retention mechanism.

Although Smallco previously engaged Gateway Financial Marketing for the provision of retail distribution services, we note that this partnership ended in early 2020. Zenith believes Smallco would benefit from distribution support, allowing the investment team to focus on research and portfolio management efforts.

As at 31 May 2021, Smallco had approximately \$A 970 million in funds under management.

As at 31 May 2021, Smallco managed approximately \$A 400 million in the strategy, all of which was in the Fund.

### INVESTMENT PERSONNEL

Name	Title	Tenure
Rob Hopkins	Managing Director/ Portfolio Manager	21 Yr(s)
Bill Ryan	Executive Director / Portfolio Manager	21 Yr(s)
Andrew Hokin	Portfolio Manager	13 Yr(s)
Paul Graham	Portfolio Manager	7 Yr(s)
Craig Miller	Portfolio Manager	16 Yr(s)
Adam Simpson	Portfolio Manager	3 Yr(s)
Han Xu	Portfolio Manager	2 Yr(s)

The investment team of seven is led by Rob Hopkins, who is supported by Bill Ryan, Andrew Hokin, Paul Graham, Craig Miller, Adam Simpson and Han Xu.

Founding members, Hopkins and Ryan, have 35 and 25 years

of industry experience, respectively. Hopkins was the Head of Small Companies Research at Macquarie Equities, BT Alex Brown, ANZ Securities and Macintosh. Ryan worked together with Hopkins at ANZ Securities for a number of years.

Prior to joining Smallco in July 2007, Hokin held a senior position within Macquarie Equities. Zenith believes Hokin has improved the rigour of the investment process since his arrival, introducing a quality rating system to the security selection process.

Graham joined Smallco in June 2014 having held senior positions at a number of prominent sell-side firms such as Nomura, Credit Suisse and Citigroup.

Miller has over 15 years of industry experience. In addition to his analytical responsibilities, Miller is responsible for a significant portion of the firm's business development, client servicing and compliance responsibilities.

Simpson and Xu are the latest additions to the team, having joined Smallco in July 2017 and November 2018, respectively. Prior to joining Smallco, Simpson worked at Macquarie Equities for a period of 15 years where he was most recently the Head of Emerging Leaders Research. Xu worked previously as an analyst at Ellerston Capital for three years and, prior to that, a sell-side analyst at UBS for nine years. Zenith notes that Smallco has continued to bolster team resourcing, which we view favourably.

All team members hold stock coverage responsibilities, with a number of key sectors allocated across the team. Outside of the key sectors, team members are given the freedom and flexibility to cover any stocks in any sector.

Hopkins is the lead portfolio manager for the Fund with increasing involvement from Simpson on the day-to-day portfolio management decisions. Despite this, decision-making for the purposes of portfolio construction follows a consensus approach.

The team has remained stable, with no staff departures since the inception of the firm. Where applicable, each team member is entitled to a profit-sharing arrangement that is commensurate with their equity/shadow equity holding, which Zenith believes provides a strong incentive to remain with the firm at least over the medium term.

Overall, Zenith considers Smallco's investment team to be highly experienced and well resourced to manage the Fund.

### INVESTMENT OBJECTIVE, PHILOSOPHY AND PROCESS

The Fund aims to achieve high absolute returns for investors by utilising a relatively concentrated, long/short strategy that is predominantly invested in Australian small capitalisation companies.

Zenith would prefer to see the delineation of a specific outperformance target, as opposed to a descriptive, qualitative objective. Zenith believes this would provide investors with greater transparency with regards to returns expectations and level of risk embedded in the Fund.

Smallco's investment philosophy is centred on the belief that equity markets are inefficient and that rigorous fundamental research can identify opportunities to generate excess returns.

Smallco targets quality companies likely to exceed consensus earnings expectations or out of favour companies expected to at least meet earnings expectations. Smallco aims to invest in companies with the potential to double in value over a three-year investment period.

Whilst the Fund's investment process is predominantly fundamental in nature, Smallco also seeks to add value via a macroeconomic overlay that is used as a source of idea generation and feedback loop.

## SECURITY SELECTION

Smallco focuses its research on stocks with market capitalisations between \$A 100 million and \$A 500 million, as it believes this segment of the market is both relatively under-researched and possesses sufficient liquidity. In addition, Smallco maintains coverage on a selection of larger cap (constituents of the S&P/ASX 100 Index) and micro cap stocks (stocks with a market capitalisation of less than \$A 100 million). However, Zenith notes that Smallco's core competency is in the research of small capitalisation securities.

Smallco is generally cautious when investing in stocks with market capitalisations of less than \$A 100 million, given their higher level of earnings forecast risk and generally less developed financial discipline and reporting. In addition, Smallco typically excludes stocks from the resources sector, biotechnology sector and other structurally challenged industries from further due diligence as it believes such earning streams are too difficult to forecast with sufficient accuracy.

The Fund applies a negative ethical screen over its investment universe, which is administered internally by the investment team. Smallco will not invest in companies with a principal business interest in tobacco, gaming, alcohol and/or armaments/cluster munitions. Zenith notes the definitions of the exclusions are at the discretion of Smallco as opposed to an independent external Socially Responsible Investing (SRI) expert.

Smallco seeks to identify quality companies that exhibit the following characteristics:

- Strong cash flow
- High Return on Funds Employed (ROFE)
- Attractive earnings outlook
- Strong competitive advantage
- Strong board and good management

Meetings with senior company management form a key part of the security selection process. The aim of the research process is to produce an internally-generated target price that reflects the company's long-term intrinsic value. Target prices are compared against current market prices to determine a stock's level of attractiveness.

Smallco's valuation process incorporates a combination of the following metrics that are based on three-year forecasts:

- Price-to-cashflow
- Price-to-earnings ratio (PE Ratio)
- Earnings before interest, taxes, depreciation and amortisation (EBITDA)

To aid idea generation and to serve as a feedback loop, Smallco informally utilises a macroeconomic overlay to make

an assessment of the economy.

A quality rating system is utilised to prevent the portfolio from holding an excessive number of lower quality stocks. Every stock considered by the investment team is assigned a numerical rating from 0 to 10 based on its quality and cyclical nature, with 10 being the most attractive. Smallco introduced the quality rating system after the Fund experienced a significant drawdown during 2008 and 2009.

Candidates for the Fund's short positions are a by-product of the idea generation process for long positions. For a stock to be considered as a short-selling candidate, it must typically fulfil the following criteria:

- Potential return of 20% to 30%
- Operating in a structurally-challenged industry
- A catalyst or event (e.g. reporting season) where the company is likely to disappoint relative to market expectations in the short term

Portfolio holdings and potential candidates for inclusion or short selling are subject to a rigorous peer-review process as part of the monthly portfolio review.

Overall, Zenith believes the security selection process adopted by Smallco is sufficiently robust and that the research conducted by the investment team is comprehensive.

## PORTFOLIO CONSTRUCTION

The portfolio construction process is primarily driven by fundamental analysis conducted by the investment team. Smallco constructs the Fund through a benchmark unaware approach, with the number of positions and weightings a function of investment opportunities rather than the relative benchmark composition.

The portfolio construction approach allows for the team's best ideas based on their risk/return profiles and the team's conviction levels to be represented in the Fund. Portfolio guidelines, stock liquidity and downside risk are considered to avoid unnecessary risks in the Fund.

The size of an individual position is dependent upon its target price and quality rating. As a guide, initial position sizes of 3%, 5% or 7% will be implemented based on a combination of these two factors.

The Fund's positions will predominantly be in small cap stocks, with exposures to S&P/ASX 100 stocks limited to 20% of the portfolio. This limit does not apply to small cap positions that have graduated into the S&P/ASX 100 Index due to strong performance.

Short positions are only initiated opportunistically and where they are sufficiently compelling based on the output of the security selection process. As such, Zenith notes that short selling is rarely utilised in the Fund.

As part of the portfolio construction process, an overall weighted average quality rating is calculated for the portfolio. The weighted average portfolio rating is not permitted to fall below 4, Smallco's assessment of the market average. In addition, Smallco employs a 25% limit on the Fund's total exposure to companies rated 3 or less. Zenith believes the presence of the quality rating system promotes discipline and mitigates the risk of the portfolio being overly exposed to lower

quality stocks.

Zenith notes that in 2016, the Fund's investment strategy was changed to allow the Fund's exposure to illiquid stocks to increase to 30%, which was previously 25%. Smallco defines an illiquid holding as a holding in which it owns greater than 75% of the security's average monthly market volume. Given the Fund typically holds a material exposure to small capitalisation securities, Zenith believes the previous limit of 25% was more appropriate.

The Fund typically holds between 25 and 35 securities. Whilst cash can be held up to a maximum of 50%, it has averaged approximately 20%. Zenith believes that actively managed equities funds should remain fully invested and that the asset allocation decision should be left to the individual investor.

Portfolio holdings will be sold, reduced or reviewed under the following circumstances:

- Smallco's valuation target has been achieved
- The investment thesis has changed
- Availability of superior investments
- To stay within the Fund's portfolio construction constraints

Short positions are subject to stop-loss limits. Whilst Zenith notes that the use of stop-losses promotes sell discipline, they can lead crystallisation of losses at an inopportune time.

Whilst Smallco is permitted to vary the Fund's net equity exposure between 0% to 150%, its has typically been around 80% given the Fund's long-biased nature. Smallco does not make tactical asset allocation decisions, with the Fund's equity exposure primarily a result of available investment opportunities, both long and short. Zenith notes that this differs from some of the Fund's peers, where tactical allocations between equities and cash can be made to suit the prevailing market conditions as an additional source of value add.

Smallco also has the ability to employ explicit leverage within the Fund. The portfolio may be geared up to 30% and allowed to drift passively to a maximum of 50%. Zenith notes that Smallco has been relatively conservative in its application of gearing, which has not been used since 2006.

Portfolio turnover expected to be approximately 40% p.a.

Zenith is comfortable with Smallco's portfolio construction approach, believing it ensures a strong connection between the output of the security selection process and the resultant weight of the stock in the portfolio.

## RISK MANAGEMENT

Portfolio Constraints	Description
Security Numbers	25 to 35
Absolute Stock Weight (%)	max: 20% (max. 10% at time of purchase)
Short Exposure (%)	max: 30% (allowed to drift passively to 50%)
Sector Exposures	Must hold stocks across at least 4 sectors

Portfolio Constraints	Description
Exposure to Illiquid Stocks (%)	max: 30%
S&P/ASX 100 Exposure (%)	max: 20%
Stop Loss - Hard (%)	max: 7% (Typically covered at 2%)
Leverage (%)	max: 30% (Allowed to drift passively to 50%)
Cash (%)	max: 50%
Expected Portfolio Turnover (%)	40% p.a.
ESG Constraints - Excluded Sectors	Alcohol, Armaments/Cluster Munitions, Gaming, Tobacco

The Fund's formal risk management constraints, as outlined above, are broad and provide Smallco with significant scope to achieve its investment objective.

Investors should be aware of the concentrated nature of the Fund and relatively generous limit relating to maximum individual security weights. Given the Fund is invested predominantly in small capitalisation securities, Zenith believes a more conservative position limit should be in place.

Smallco defines an illiquid holding as a holding in which it owns greater than 75% of the security's average monthly market volume. Zenith believes that Smallco's assessment of stock liquidity is not as conservative as peers. Investors should be aware that during a significant market event the liquidity profile of the Fund could be low, leading to potential capital impairment.

Smallco's detailed fundamental approach to stock selection, including the quality rating system, acts as the main tool for mitigating the risk of poor stock selection.

Stop-losses are applied at the individual stock level. A hard limit is applied where the loss from an individual short position equates to 7% of the portfolio. Whilst Zenith believes this limit is relatively broad and potentially exposes the Fund to an excessive loss from a single position, we note that loss-making short positions are typically removed at the 2% level.

Formal internal meetings occur on a monthly basis to monitor the portfolio's characteristics, exposures and market events. However, given the flat investment team structure, Zenith notes that communication amongst the team occurs on an ongoing basis.

Notwithstanding the issues highlighted above, Zenith believes Smallco's risk management processes are adequate, particularly given the detailed due diligence conducted as part of the security selection process. However, investors should be aware there is a significant reliance on the judgement and skill of Smallco's investment team in managing investment risk.

### Responsible Investment Approach

Smallco does not have an established Responsible Investment Policy and is not a signatory of the United Nations Principles for Responsible Investment (UNPRI).

In addition to the environmental, social and governance (ESG)

exclusions in the table above, Smallco incorporates ESG considerations into its investment process, with a particular focus on governance. Zenith believes that this qualitative analysis of a company's operations is crucial on a forward basis, given that a company's performance with regards to ESG considerations is increasingly being reflected in its share price. Overall, while we do not believe Smallco considers ESG factors to the same extent as peers, we are comfortable with their approach.

From a classification scale of:

- Impact
- Thematic
- Integrated
- Aware
- Traditional

Zenith has assigned the Fund a Responsible Investment Classification of **Aware**.

## ADMINISTRATION AND OPERATIONS

### Operations

The Compliance Committee is responsible for the operational risk framework.

### Service Providers

#### Securities Lender

Macquarie

#### Administrator

Link Fund Solutions

#### Custodian

Link Fund Solutions

#### Auditors

Crowe Horwath

### Pricing

The Fund's assets and liabilities are usually valued each business day. Generally, listed securities are valued using the last available market close price quoted on the relevant exchange. Other assets are valued at their recoverable value with liabilities valued at cost.

### Personal trading

Personal trading is allowed, however prior approval must be gained from the principals.

### Compliance

Smallco holds an Australian Financial Services Licence (AFSL). Smallco has lodged the Fund's compliance plan with ASIC and established a compliance committee with a majority of external members.

A management cost of 1.55% p.a. (including expense recoveries) applies to this Fund. The Fund also has a performance fee of 18.64%, payable on any increase in the net asset value of the Fund, subject to the recoupment of all prior negative performance. The performance fee is calculated and paid semi-annually.

Zenith believes the performance fee for the Fund is poorly structured due to the lack of an appropriate benchmark. Given the Fund will typically exhibit equity-like risk/return characteristics, an appropriate benchmark is required to ensure that any performance fees payable are justified. As it currently stands, Zenith believes that the hurdle applied to the performance fee is too low and not commensurate with the Fund's risk profile.

Overall, Zenith believes the Fund's fee structure is expensive, relative to peers, given its stated objectives. In addition, we believe that investors have not been sufficiently compensated by way of risk-adjusted performance given the fees paid over the past three years (ending 30 June 2020).

There is also a 0.45% buy/sell spread applicable to all applications and redemptions. Zenith believes the buy/sell spread is high on an absolute and relative basis. As such, we believe there is scope for this to be reduced.

*(The fees mentioned above are reflective of the flagship version only, fees may differ when the product is accessed through an alternative investment vehicle such as platform).*

Fees Type	Fund	Sector Average (Wholesale Funds)
Management Cost	1.55% p.a.	1.14% p.a.
Description		
Performance Fee	18.64% of the unit price increase over each 6-month period subject to the recoupment of all prior negative performance.	
Buy Spread		Sell Spread
Buy / Sell Spread	0.45%	0.45%

## INVESTMENT FEES

*The sector average management cost (in the table below) is based on the average management cost of all flagship Australian Shares - Long/Short funds surveyed by Zenith.*

To ensure consistency, Zenith rates all Australian equities funds against a standard benchmark (S&P/ASX 300 Accumulation Index). Smallco does not benchmark itself against an index.

All commentary below is as at 31 May 2021.

The Fund aims to achieve high absolute returns for investors by utilising a relatively concentrated, long/short strategy that is predominantly invested in Australian small capitalisation companies.

Zenith would prefer to see the delineation of a specific outperformance target, as opposed to a descriptive, qualitative objective. Zenith believes this will provide investors with greater transparency with regards to returns expectations and to the level of risk embedded in the Fund.

The Fund has demonstrated material outperformance relative to Zenith's assigned benchmark and the median manager over the medium to long term.

The Fund's volatility (as measured by Standard Deviation) has been higher than Zenith's assigned benchmark since inception.

### RELATIVE PERFORMANCE ANALYSIS

Alpha Statistics	Incpt.	5 yr	3 yr	1 yr

Risk/Return	Incpt.	5 yr	3 yr	1 yr
Information Ratio	0.47	0.15	0.04	-0.23

All commentary below is as at 31 May 2021.

Zenith seeks to identify funds that can outperform in over 50% of months in all market conditions, as we believe this represents consistency of manager skill. The Fund has achieved this outcome since its inception.

The Fund has displayed stronger consistency of outperformance during falling market conditions since inception.

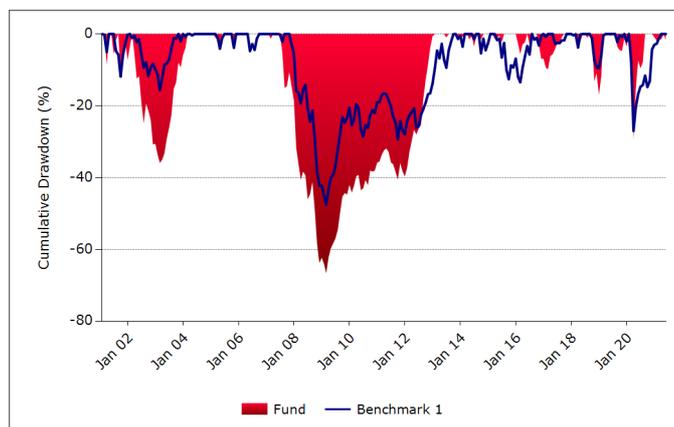

### DRAWDOWN ANALYSIS

Drawdown analysis assesses the relative riskiness of a Fund versus the benchmark, in reference to capital preservation. The maximum Drawdown is recorded as the percentage decline in the value of a portfolio from peak to trough (before a new peak is achieved). All Drawdown analysis is calculated commencing from the inception date of the Fund in question, and Drawdown analysis for the Fund and benchmark(s) are calculated independently. That is, the largest drawdown for the Fund and benchmark(s) will not always refer to the same time period.

Drawdown Analysis	Fund	Benchmark 1
Max Drawdown (%)	-66.63	-47.55
Months in Max Drawdown	20	16
Months to Recover	47	56

Worst Drawdowns	Fund	Benchmark 1
1	-66.63	-47.55

Worst Drawdowns	Fund	Benchmark 1
2	-35.91	-26.97
3	-29.30	-15.65
4	-16.93	-13.46
5	-10.58	-11.85

All commentary below is as at 31 May 2021.

The Fund experienced drawdowns that were more severe than those of the benchmark in 2002 and 2008. However, the Fund subsequently recovered from its maximum drawdown more swiftly than the benchmark.

Zenith notes that the drawdowns occurred prior to the introduction of the quality rating system in July 2008, which seeks to prevent the portfolio from holding an excessive number of lower quality stocks. Zenith notes that the Fund has generally demonstrated a propensity to protect investor capital in declining markets since the introduction of the quality rating system.

### INCOME/GROWTH ANALYSIS

Income / Growth Returns	Income	Growth	Total
FY to 30 Jun 2020	7.97%	-16.24%	-8.27%
FY to 30 Jun 2019	13.48%	-3.68%	9.80%
FY to 30 Jun 2018	11.10%	16.40%	27.50%
FY to 30 Jun 2017	8.50%	1.00%	9.50%
FY to 30 Jun 2016	7.20%	13.00%	20.20%
FY to 30 Jun 2015	7.00%	8.70%	15.70%
FY to 30 Jun 2014	0.90%	20.50%	21.40%
FY to 30 Jun 2013	1.12%	56.86%	57.98%
FY to 30 Jun 2012	1.39%	13.15%	14.54%

The Fund does not target specific income levels.

Where applicable, distributions are paid annually. Zenith would prefer a more frequent distribution profile to alleviate potential issues involved with large distributions at 30 June.

The Fund's portfolio turnover is expected to be approximately 40% p.a., which Zenith considers low. Smallco was not able to provide any insight on the proportion of expected turnover attributed to the resizing of existing positions and that which is due to initiating and closing positions. Given this expected level of turnover, the majority of the Fund's returns are expected to be delivered via capital appreciation in the unit price, rather than through the realisation of capital gains in income distributions. In addition, realised capital gains are highly likely to be eligible for the capital gains tax discount. As such, holding all else equal, the Fund may be more appealing to investors who are high marginal tax rate payers as it will result in superior after-tax return outcomes.

## REPORT CERTIFICATION

Date of issue: 17 Jun 2021

Role	Analyst	Title
Author	Jacob Smart	Senior Investment Analyst
Sector Lead	Quan Nguyen	Head of Equities
Authoriser	Bronwen Moncrieff	Head of Research

## ANALYST DISCLOSURE

As at the time this report was issued, the Analyst, report Authoriser and/ or the Sector Lead holds interests in either the product, the product issuer or a relevant related party. The Analyst/Authoriser/Sector Lead certifies that the extent of the holding is non-material in nature and has been undertaken in accordance with Zenith's Trading Policy and RG79.149(c).

## DISCLAIMER AND DISCLOSURE

Zenith Investment Partners (ABN 27 103 132 672) is the holder of Australian Financial Services Licence 226872 and is authorised to provide general financial product advice. This Product Assessment Report (report) has been prepared by Zenith exclusively for Zenith clients and should not be relied on by any other person. Any advice or rating contained in this report is limited to General Advice for Wholesale clients only, based solely on the assessment of the investment merits of the financial product. This report is current as at the date of issue until it is updated, replaced or withdrawn and is subject to change at any time without notice in line with Zenith's regulatory guidelines. Zenith clients are advised to check the currency of reports and ratings via Zenith's website for updates and should also verify information in relation to the fund with the relevant Fund Manager. Any advice contained in this report has been prepared without taking into account the objectives, financial situation or needs of any specific person who may read it. It is not a specific recommendation to purchase, sell or hold the relevant product(s). Investors should seek their own independent financial or tax advice, obtain a copy of, and consider any relevant PDS or offer document and consider the appropriateness of this advice in light of their own objectives prior to making any investment decision. Zenith charges an upfront flat fee to the Product Issuer, Fund Manager or other related party to produce research on funds that conform to Zenith's Research Methodology. Zenith's fee and Analyst remuneration are not linked to the rating outcome in any way. Views expressed in Zenith reports accurately reflect the personal, professional, reasonable opinion of the Analyst who has prepared the report. Zenith may also receive a fee for other non-research related services such as subscription fees for Zenith's research services and/or for the provision of investment consultancy services. Conflicts management arrangements are in place where Zenith provides research services to financial advisory businesses who provide financial planning services to investors and are also associated entities of the product issuers, with any such conflicts of interest disclosed within reports as appropriate. Full details regarding such arrangements are outlined in Zenith's Conflicts of Interest Policy [www.zenithpartners.com.au/ConflictsOfInterestPolicy](http://www.zenithpartners.com.au/ConflictsOfInterestPolicy)

Zenith's research process seeks to identify investment managers considered to be the 'best of breed' through a comprehensive, multi-dimensional selection process. Zenith utilises both quantitative and qualitative factors in its ratings models. Models maximise commonality across different asset classes while retaining flexibility for specialist asset classes and strategies. The selection process is rigorous in both its qualitative and quantitative analysis and each component is equally weighted. Zenith does not manage any proprietary assets and as such Zenith is able to choose investment managers with absolute independence and objectivity. More detailed information regarding Zenith's fund research methodology and Zenith's traditional index research methodology, coverage and ratings is available on Zenith's website at [Fund Research Methodology](#) and [Traditional Index Research Methodology](#).
